

• HH-2076W Dispersing agents

It is a wetting and dispersing agent for water-based printing inks and coating systems. It is used for grinding resin-containing materials. It can strongly reduce the viscosity of the color paste, provide high gloss, be stable in thermal storage, increase the tinting power of the pigment, and shorten the grinding time. It is a highly cost-effective water-based dispersant.

• Product Data

Composition

Polyoxyethylene-polyoxypropylene copolymer

Typical Properties:

Appearance: colorless transparent liquid

Odor: odorless

Solid content: 40%

Viscosity: 500~1000 mPas (25℃)

PH value: 8.5-9.5

*The values indicated in this data sheet describe typical properties and do not constitute specification limits.

• Applications

Recommended Use

1. Grinding of resin-containing ink color paste.
2. Industrial coatings and leather color paste coatings containing resin, water-based epoxy system, water-based industrial paint.
3. Water-based printing inks (flexographic plate, gravure).
4. Water-based pigment high-content resin system color paste.

Note: This instruction manual is for reference only and does not have any guarantee properties. Please test its applicability in advance.

• Addition amount

The recommended amount of grinding resin in the formula is 20%~30% (Pigment amount %), and the dispersant is 2~5% (formula amount). Please do a step test

for the specific optimal dosage.

*. The above data are empirical dosages, and the optimal dosage needs to be determined through a series of tests.

• Incorporation and Processing Instructions

To achieve the best performance, the additives should be added to the grind first, followed by the pigment. Premix the resin and solvent components of the grind, then slowly add the additives while stirring. Do not add the pigment until the additives are well mixed.
